

A 200-bed Superspeciality Hospital with Radiation Oncology in Jaipur

The proposal is to establish a **200-bed superspeciality hospital in Jaipur** covering oncology, cardiac sciences, neurosciences, maternal & child health, orthopaedics, gastroenterology, nephrology, emergency & trauma, and critical care. The hospital is planned to have a dedicated radiation oncology unit equipped with 2 linear accelerators and deliver complex specialist care for the region.

Hospital Overview and Services

A **200-bed superspeciality hospital in Jaipur** designed as a complete specialist care destination for the city and the surrounding region. The facility will be operated to international standards and will feature a **dedicated Radiation Oncology Unit** alongside other services detailed below.

Specialist care	Critical care & emergency	Radiation oncology
- Cardiac sciences & cath lab - Neurosciences & stroke unit - Maternal & child health, NICU - Orthopaedics & spine - Gastroenterology & endoscopy - Nephrology & dialysis - General & laparoscopic surgery	- Emergency & Trauma (24×7) - MICU, SICU, Cardiac ICU - Advanced respiratory care - Pulmonology - Diabetes & metabolic care - Diagnostics — MRI, CT, lab - Blood bank, pharmacy	2 linear accelerators - HDR brachytherapy - CT simulator & planning - Day-care chemotherapy - Surgical oncology - Medical oncology - Cancer screening & follow-up

Sample architectural stack

An indicative G+7 layout with two basement levels that could be considered for this hospital. The final structure will vary depending on the chosen layout and plan. Clinical zones are organised vertically by intensity of care, with radiation oncology and diagnostics at basement level, emergency and reception at ground, specialist OPD and operating theatres above, inpatient wards and critical care higher up, and premium inpatient at the top.

The build timeline is **approximately 30 months** from land allotment to full operations, with a phased start of operations.

Floor	Zone	Clinical content
F7	Premium inpatient	Single-room suites, executive health rooms, post-procedure step-down
F6	Oncology inpatient	Medical & surgical oncology wards, day-care chemotherapy bays, satellite pharmacy
F5	Critical care	MICU, SICU, Cardiac ICU, isolation rooms, HDU
F4	Maternal & child health	Labour & delivery, NICU, paediatrics ward, PICU, neonatology
F3	Operating theatres	Main OT suite (general, cardiac, neuro, ortho, GI, onco), cath lab, endoscopy, pre-op & recovery
F2	Specialty wards	General medicine, cardiology, neurology, ortho, gastro inpatient wards, step-down beds
F1	Specialist OPD	Multi-disciplinary clinic pods, dialysis, day surgery, executive health
G	Reception & emergency	Reception & registration, A&E with separate entrance & resus, pharmacy, blood bank, ambulance bay
B1	Diagnostics & imaging	MRI, CT, PET-CT, mammography, ultrasound, central pathology & microbiology lab
B2	Radiation oncology	Linear accelerator vault (2 LINACs), HDR brachytherapy, CT simulator, dosimetry & treatment planning

Key Features of the Facility

- **Specialist care and cancer care under one roof.** Cardiac, neuro, gastro, ortho, and complex surgical care sit on the same campus as radiation oncology and chemotherapy, sharing diagnostics, ICU, blood bank, and pharmacy.
- **Super-specialist care closer to home.** This facility will make complex cardiac and neuro interventions, radiation therapy, advanced gastrointestinal and hepatobiliary surgery, high-risk obstetrics, and dedicated critical care available locally. Two linear accelerators increase radiation throughput across the region, and the super-specialist clinical team gives patients depth of expertise without leaving the state.
- **Accredited to national and international standards.** The hospital will be commissioned with **NABH** (hospital), **NABL** (laboratories), and **AERB** (radiation safety) accreditations from day one. Clinical governance will be aligned with internationally **JCI-accredited** hospitals, with internal audits conducted to JCI protocols.
- **Empanelled with all major public health schemes.** Empanelment under the **Rajasthan Government Health Scheme (RGHS)**, **Chiranjeevi Yojana**, **Ayushman Bharat (PM-JAY)**, **CGHS**, and **ECHS** — ensuring that state-scheme, central-scheme, and defence beneficiaries can access the facility from the day operations commence.
- **A regional referral destination for over 25 million people.** Designed to serve Jaipur and the surrounding districts of Sikar, Alwar, Bharatpur, Ajmer, Dausa, and Tonk, helping provide complex specialist care close to home and reducing the medical travel burden currently borne by patients and their families.

This note is a draft concept for discussion and all figures and plans are indicative and subject to formal feasibility review.
